Duration	16 mins
Grade	**15.00** out of 15.00 (**100**%)

Question **1**

Correct

Mark 1.00 out of 1.00

_____sort is the simplest sorting algorithm that works by repeatedly swapping the adjacent elements in case they are unordered in n-1 passes.

a. Bubble ✓

b. Insertion

c. Selection

d. Complexity

Question **2**

Correct

Mark 1.00 out of 1.00

_____ search takes a sorted/ordered list and divides it in the middle.

a. Hash

b. Linear

c. Binary ✓

d. Both (1) & (3)

Question **3**

Correct

Mark 1.00 out of 1.00

Which of the following is a limitation of binary search?

a. It can only be applied to large lists

b. It requires the list to be sorted ✓

c. It is slower than linear search for small lists

d. It does not work with negative numbers

Question **4**

Correct

Mark 1.00 out of 1.00

In linear search, how is the element searched?

- a. By comparing each element in the list sequentially ✓
- b. By using a hash function
- c. By sorting the list first
- d. By dividing the list into halves

Question **5**

Correct

Mark 1.00 out of 1.00

Which of the following best describes the process of a linear search?

- a. Dividing the list in half repeatedly
- b. Sorting the list before searching
- c. Skipping every second element
- d. Checking each element sequentially ✓

Question **6**

Correct

Mark 1.00 out of 1.00

Which of the following scenarios is best suited for applying binary search?

- a. When the list contains duplicate elements
- b. When the list is unsorted
- c. When the list is very small
- d. When the list is sorted ✓

Question **7**

Correct

Mark 1.00 out of 1.00

Which method of searching involves sequentially comparing each element until a match is found?

- a. Hashing
- b. Jump search
- c. Binary search
- d. Linear search ✓

Question **8**

Correct

Mark 1.00 out of 1.00

In which type of search is the list divided into smaller sublists during the search process?

a. Sequential search
b. Linear search
c. Binary search ✓
d. Hash search

Question **9**

Correct

Mark 1.00 out of 1.00

What is the key characteristic of binary search?

a. It works on unsorted lists
b. It always starts from the beginning of the list
c. It can be applied only if the list is sorted ✓
d. It compares elements sequentially

Question **10**

Correct

Mark 1.00 out of 1.00

In a linear search, how many comparisons are made in the worst-case scenario to find an element in a list of size n?

a. n ✓
b. 1
c. n/2
d. log n

Question **11**

Correct

Mark 1.00 out of 1.00

What is searching in the context of computer science?

a. Determining whether an element is present in a list ✓
b. Inserting elements into a list
c. Sorting elements in a list
d. Deleting elements from a list

Question **12**

Correct

Mark 1.00 out of 1.00

In binary search, how is the middle element determined?

a. By starting from the first element
b. By dividing the list length by two ✓
c. By comparing each element sequentially
d. By using a hash function

Question **13**

Correct

Mark 1.00 out of 1.00

During a linear search, what is the maximum number of comparisons needed to find an element in a list of size n?

a. n/2
b. log n
c. n ✓
d. n-1

Question **14**

Correct

Mark 1.00 out of 1.00

Which of the following is a conventional searching technique?

a. Dynamic search
b. Hashing
c. Binary search
d. Linear search ✓

Question **15**

Correct

Mark 1.00 out of 1.00

Which of the following is not a limitation of binary search algorithm?

a. There must be a mechanism to access middle element directly
b. Must use a sorted array
c. Binary search algorithm is not efficient when the data elements more than 1500 ✓
d. Requirement of sorted array is expensive when a lot of insertion and deletions are needed
